

ACCELERATED MATH

Accelerated Math supplements your child's core math curriculum at school. In addition to making math practice fun and exciting for every child, Accelerated Math provides continuous feedback to personalize instruction so your child can achieve maximum success.

Is ACCELERATED MATH right for your child?

- Does your child struggle with math?
- Is your child falling further and further behind in their math class because they can't keep up with the other students?
- Does your child hate completing their math homework?
- Do you feel that your child needs personalized interaction to target their weak areas?

If any of the above sounds like your child, ACCELERATED MATH can help! Picture your child smiling broadly when it's time to do their math homework. Imagine individualized assignments that allow your child to get the help in the areas they need. Imagine your child completing their math homework enthusiastically and asking for more!

How does it work?

Accelerated math works at a pace that is challenging, but not frustrating.

Paper Assignments: Personalized assignments are printed for each student at their own individual level. Students complete these paper assignments, showing all of their work, and then convert their answers onto "bubble" cards.

Bubble Cards: Answers get scanned, and the computer scores the work.

Results: After scoring the assignments, the program enters the results into the grade book and prints out a TOPS report.

Discussion: the fast report provides your child with immediate feedback, and allows each child to have a one-on-one session with the instructor.

Benefits

Accelerated Math will change the way your child looks at math. Instead of dreading math assignments, your child is challenged at their own individual level, allowing them to work on the areas where they need the most help. Immediate feedback allows your child to grow and become better in these areas.

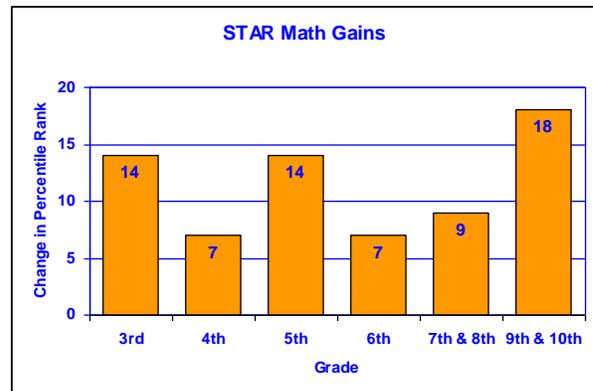

Accelerated Math has many positive benefits, such as:

- It makes math fun to learn. Your child learns to love math instead of hating it!
- It improves math skills by building your child's enthusiasm. Your child will happily tackle advanced objectives and improve their math skills on their own.
- It ensures success for every child by motivating all math skill levels.
- It personalizes instruction for your child. Individualized assignments target your child's level.

Proven Results

Scientific research demonstrates that Accelerated Math encourages excitement about math and allows for targeted instruction based on each student's individual level, while saving time and reducing paperwork.

Accelerated Math has been proven to dramatically raise student math achievement. More than 2,000 third-through tenth-grade students in 125 classrooms from 24 states participated in a study. Students in Accelerated Math classrooms out gained non-Accelerated Math students by between 7 and 18 percentiles.
